NSA Forensics Team

2/23/2024

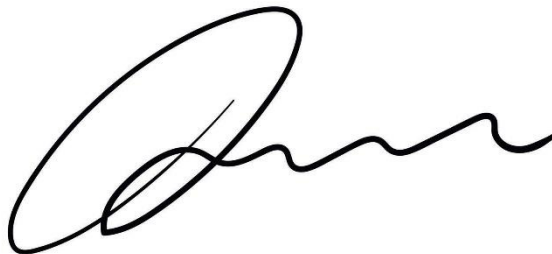

FOUO

Attention all cyber forensics specialists! We have been on the tail of a powerful organization of enemy cyber operatives for quite some time now, and there has finally been a break in the case. A few days ago, we captured one of our lead suspects and have been detaining him for questioning in an off-site location.

While he refuses to answer any of our questions, we have heard rumors of a large-scale cyber attack to be acted out by the rest of the group. It goes without saying that an attack like this must be avoided at all costs. To attempt to circumvent a possible catastrophe, we seized every file and device we could find at the suspect's residence and turned them over to our investigative teams.

This is where you come in, along with this letter is a virtual image of one of the devices that we found that we suspect contains evidence that can help us stop this attack. Your job will be to investigate the device and try to crack the encrypted data and help prevent a disaster. To aid you in your task we have installed some tools for you to communicate with us from the device, simply type 'nsa help' in the terminal to get started.

Good luck agent,

A stylized, handwritten signature in black ink, featuring a large, looping initial 'J' followed by several smaller, connected loops and a final horizontal stroke.
